AMENDMENT

IN THE CLAIMS:

1. (ORIGINAL) A gear reduction unit comprising:
a drive shaft;
an electric motor that rotatably drives the drive shaft,
a magnet disposed on the drive shaft;
a sensor disposed in proximity to the magnet; and
a removable connector that supports the sensor and carries current to the electric motor.
2. (ORIGINAL) The gear reduction unit according to claim 1, wherein a maximum distance between the sensor and the magnet is 4 mm.
3. (CURRENTLY AMENDED) The gear reduction unit according to claim 2, wherein the a distance between the sensor and the magnet is 2 mm.
4. (ORIGINAL) The gear reduction unit according to claim 1, wherein the magnet is a ring having at least one North pole and at least one South pole and is polarized transverse to a longitudinal axis of the drive shaft.
5. (ORIGINAL) The gear reduction unit according to claim 4, wherein the magnet has a plurality of North poles and a plurality of South poles.
6. (CURRENTLY AMENDED) The gear reduction unit according to claim 1, wherein the removable connector comprises a printed circuit board defining a plane, wherein the sensor is fixed to the printed circuit board and offset relative to the plane formed by the printed circuit board.
7. (CURRENTLY AMENDED) The gear reduction unit according to claim 6, further comprising connection tabs that are fitted to the sensor to fix the sensor to the printed circuit board.

Serial No.10/762,587

02MRA0149

8. (CURRENTLY AMENDED) The gear reduction unit according to claim 6, wherein the removable connector further comprises electrical supply contacts to supply the current to the electric motor.

9. (CURRENTLY AMENDED) The gear reduction unit according to claim 1, wherein the removable connector includes a guide hole and the sensor is disposed in a the guide hole in the connector.

10. (CURRENTLY AMENDED) The gear reduction unit according to claim 1, wherein the electric motor comprises a housing and the removable connector comprises a case, wherein an interface between the housing and the case forms a watertight seal.

11. (ORIGINAL) The gear reduction unit according to claim 1, wherein the sensor is a Hall effect sensor.

12. (CURRENTLY AMENDED) A connector for a gear reduction unit, comprising:
a printed circuit board defining a plane;
a sensor ~~is fixed~~ to the printed circuit board and offset relative to the plane formed by the printed circuit board; and
a case housing the printed circuit board and the sensor.

13. (CURRENTLY AMENDED) The connector according to claim 12, further comprising connection tabs that are fitted to the sensor to fix the sensor to the printed circuit board.

14. (ORIGINAL) The connector according to claim 12, further comprising electrical supply contacts for supplying current to a motor in the gear reduction unit.

15. (CURRENTLY AMENDED) The connector according to claim 12, wherein the case ~~has~~ includes a guide hole and wherein the sensor is disposed in the guide hole.

16. (ORIGINAL) The connector according to claim 12, wherein the sensor is a Hall effect sensor.

17. (NEW) The gear reduction unit as recited in claim 1, wherein the removable connector includes a releasable fastener that releasably secures the removable connector in the gear reduction unit.
